Automatic Vehicle Identification (AVI) System
Using TRANSIT Ultimate long range reader

Features That Make a Difference:

- Compact industrial design
- Read range up to 10 m (33 ft)
- Object speed up to 200 km/h (124 mph)
- Well defined adjustable read range
- Multi-channel frequency offset
- Variety of long range tags available
- Color LED indication
- Tag authentication based on AES encryption
- Bi-directional communication using two RFID channels
- Supports backward-compatibility mode with previous TRANSIT readers
- Weatherproof housing
- Wall mounting included

The Nedap Automatic Vehicle Identification (AVI) System is based on semi-active RFID technology, which enables automatic vehicle identification at distances of up to 10 m (33 ft) and speeds of up to 200 km/h (125 mph). Positive identification does not require any action by the driver; the vehicle is automatically identified as it enters the identification range of the reader. The Nedap AVI system is comprised of a long distance standard TRANSIT reader and tags.

This high-end reader is designed to perform well in high security applications, demanding vehicular access control applications and under harsh environmental conditions. The TRANSIT Ultimate offers the highest level of security and convenience for both vehicles and drivers. The built-in antenna, an integrated read range adjustment board and a variety of communication interfaces ensure seamless and flexible integration. The identification lobe of the reader is a directed beam, offering precise determination of the detection area. A second RFID communication channel is used for advanced bidirectional communication and secure tag authentication.

Channel selection
The TRANSIT Ultimate operates on a factory-set frequency. The frequency channel selection allows multiple readers to operate in close vicinity of each other without interference.

Read Range Adjustment
The reader efficiently resolves typical multi-lane, entry and exit reader challenges. The read range of the TRANSIT Ultimate can be adjusted to offer secure and reliable identification in demanding applications.

Housing & Mounting
The weatherproof TRANSIT Ultimate reader features an IP66 certified housing. The reader continues to operate reliably under harsh environmental conditions and is able to withstand exposure to rain, snow and ice. Wall mounting equipment is included.

Interfaces & Protocols
The TRANSIT Ultimate reader is designed for seamless and flexible integration into existing or newly installed Software House access control systems. The TRANSIT reader interfaces with the host system via open industry-standards protocols such as Wiegand or Omron. Customer specific protocols can be implemented on request.

Tags
The Nedap AVI system offers a variety of long range, lithium-powered tags for various applications. The tags are programmed with random numbers in a 26-bit Wiegand format and feature an integrated mounting device to provide ease of installation.

The new TRANSIT Ultimate reader is fully backwards compatible with existing TRANSIT transponders and readers in existing installations.
Window Button Tag
The Window Button tag has exceptional design that suits the interior of a passenger car. It can be installed in seconds with an integrated suction pad. There is an option for a push button version that requires driver authorization.

Compact Tag
The Compact Tag is a slimline RF tag combining long and short range identification in various applications. The Compact Tag has a standardized credit card size, and can be identified up to 7m (23ft) with the TRANSIT Standard and TRANSIT Extended readers.

Heavy Duty Tag
Developed for applications requiring long-range identification in harsh environments, such as explosive zones, the Heavy Duty Tag is weather, shock, and vibration proof and can withstand harsh chemicals.

Specifications

Physical
- Dimensions: 330 x 274 x 140mm (13 x 10.8 x 5.5 in)
- Weight: 5 kg (11 lbs)
- Housing: Cover: ABS plastic; Housing: Die-casting ADC12
- Operating temperature: -30°C to 60°C (-22°F to 140°F)
- Mounting: Wall mounting included

Communication
- Detection Range: Up to 10 m (33 ft)
- Range Check: Acoustic by built-in beeper
- Object Speed: Up to 200 km/h (124 mph) at appropriate distance
- Frequency Offset: 138 channels (32 channels U.S.) – 600 kHz spacing to avoid interference (to be used when TRANSIT readers are installed in close vicinity of each other)
- Polarization: Circular (LHC) (2450 MHz) integrated antenna; Horizontal (433 MHz); dedicated antenna
- Antenna Connection: One (1) optional external inductive antenna connection
- Interfaces: RS232, RS422, RS485, Profibus DP, TCP/IP
- Communication Protocols: CR/LF, DC2/DC4 and various OEM protocols (for more information refer to the firmware manuals)
- Encrypted Air Interface: Nedap proprietary encryption standard

Electrical
- Power: 100-240V AC (60 - 50 Hz) or 24V DC (±10%)
- Power consumption: <25VA (on AC), <20 watt (on DC)
- Operating frequency: 2,438 – 2,457 GHz, 433.62 and 434.22 MHz (RF-Cat 3) Ton <5sec

Inputs/Outputs
- Input: 3 dry contacts or TTL

Card Boosters
The Card Booster attaches to the inside of the windshield and amplifies the read range of an inserted proximity card up to 10 m (33 ft). The Card Booster Unit is ideal for applications in which drivers already have an ID card for access control to the building, Time & Attendance system, and vending machines. The Booster is available for almost all card technologies:
- Smartcard Booster Ultimate: supports ISO 14443 or 15693 compliant smartcards (eg. MIFARE, MIFARE DESFIRE, LEGIC, Calypso and HID iClass) operating on 13.56 MHz. LEGIC
- Booster Ultimate: supports ISO 14443, 15693-3 or LEGIC RF compliant smartcards operating on 13.56 MHz
